

△△ STARPLUS[®] STSe[™]

Perfect for Small Businesses

REFRESHINGLY SIMPLE,
REFRESHINGLY AFFORDABLE

STARPLUS[®] STSe Phone System

Refreshingly Flexible

- PBX/Centrex Compatibility
- Supports full T1, fractional T1 or ISDN PRI
- Phones are CTI adaptable
- ADP – Additional Device Port on every phone for fax or modem connection
- Standard 2.5 mm Headset Jack on every phone
- Voice Mail does not reduce System Capacity
- UCD & LCR Capability
- Fax Detect – Eliminates the need for a dedicated FAX line

Refreshingly Simple

- Easy to Configure, Install & Program
- One phone model loaded with features
- Soft keys below display enable quick access to system features
- Name & number display Caller ID is available on all phones
- Optional In-Skin Voice Mail
- Basic or Expanded System options

Our new backlit display telephone has all the great features of the original STS phone, with the added advantage of a blue backlight. The blue backlight is perfect for low light environments and makes an attractive addition to any desktop.

NEW & IMPROVED!

The Vodavi STARPLUS STS product family is a market leader in small business. With over 30,000 systems installed throughout the United States, you can be assured of the system's track performance and reliability.

Vodavi's popular STARPLUS STS telephone system just got better! Our new STARPLUS STSe master cabinet has a host of new features that will help you stay ahead of the game. With the same modest price, the STARPLUS STSe remains a refreshingly affordable communications solution for enterprises requiring less than 48 phones.

STS System Capacities	CO Lines	Digital Stations	Analog Ports
Basic System (BKSU)	12	24	2*
Max Capacity With (EKSU)	24	48	2*

*The total number of analog (SLT) devices per system that can be supported is 22 (including the 2 on board).
If 22 SLT's are installed, the digital station count is reduced to 8.

△△ STARPLUS® STSe *In-Skin Voice Mail*

Vodavi offers two voice processing solutions for the STARPLUS STSe System, an In-Skin Flash Voice Mail Card and an In-Skin HDD Voice Mail Card.

STARPLUS STSe In-Skin Flash Voice Mail Card

Designed for small office/home office applications, this is a great entry-level voice mail system that will allow users to reap the benefits of voice messaging with very little investment. This is an 8-port system with 64 mailboxes and 3 hours of message storage, expandable to 9 hours.

This system has the following productivity enhancing features:

- Live Call Screening/Answering Machine Emulation
- Automated Attendant
- Automatic Routing
- Dial-by-Name
- Fax Detection
- Menu Routing
- One Touch Record
- Pager Notification
- Password Protection
- RAN Announcement Mailbox
- Smart Transfer
- Time & Date Stamp
- Voice Messaging

STARPLUS STSe In-Skin HDD Voice Mail Card

For a more robust feature set and larger message storage capacity, this HDD-based voice mail card is perfect for the medium-sized business needing advanced message notification options, sophisticated call routing or for businesses requiring message storage and retrieval over long periods of time. This is also an 8-port system, but has unlimited mailbox capacity and up to 200 hours of message storage.

In addition to all the features offered by the Flash-based system, the HDD-based system also offers:

- Cascading Menus
- Cell Phone Notification
- Flag messages with special delivery options
- Incoming Caller ID
- Park & Page

The 2.4 GHz Wanderer - With many of the benefits of the STS phone, the Wanderer adds mobility from 100 to over 250 feet with the accessibility of your desktop phone number and extension. The Wanderer range may vary based on environment.

Door Phone - Add a one-touch two-way Vodavi speakerphone for communication with visitors at a gate or door entry.

STARPLUS STSe In-Skin Voice Mail Solutions

By offering two voice mail solutions that plug right in to the STARPLUS STSe system cabinet, voice mail becomes a refreshingly affordable option for any small business. The in-skin "card" eliminates the need for expensive external equipment.

Both systems are 8-ports. The Flash card is for users requiring fewer than 64 mailboxes and 9 hours of storage. The HDD card is for users with greater mailbox and message storage requirements, or more sophisticated call routing needs.
